Power Sliding Door Adjustment

POWER SLIDING DOOR ADJUSTMENT

In order for the power sliding door system to function properly the door must move freely and smoothly. The power sliding door system can accommodate for some minor changes in the effort required to move the door. However, in extreme conditions the door may need to be mechanically adjusted for proper fit. ([Refer to 23 - Body/Doors - Sliding/DOOR, Sliding/Adjustments](#)).

If a problem exists with the power sliding door and it is suspected to be extreme effort, check for proper door alignment and adjustment first, then check the door tracks and drive unit for free manual operation. ([Refer to Body/Doors - Sliding/DOOR, Sliding/Adjustments](#)) for detailed instructions.
